

SOFTWARE INFORMATION

BZS-7020A V5.26 for DVS-7300A and DVS-7350A

Product: **BZS-7020A, DVS-7300A, DVS-7350A**

Serial No: **All**

DESCRIPTION

BZS-7020A Operating Software V5.26 for the DVS-7300A and DVS-7350A has been released. This software supersedes V5.25.

IMPROVEMENTS

The following conditions are corrected:

1. When DME wipe was set to reverse and the Transition Type in each M/E row (from each state of MIX/NAM/WIPE) was subsequently switched to DME wipe, one frame of the DME picture from before the switch-over was still visible.
2. When Next Transition was set to KEY, Transition Type was set to DME, and the BKGD of Next Transition and the MIX of Transition Type were subsequently pressed simultaneously, the DME picture was momentarily outputted.
3. In a DVS-7350A, the Auto Clean Function did not work when the transition was executed using the AUTO TRANS button in the P/P row or the fader lever.

COMPATIBILITY

All snapshots, key frames and setup data made from previous versions are supported by this version.

INSTALLATION PROCEDURE

For installation details, refer to the DVS-7000A Installation Manual.

CONFIRMATION PROCEDURE

Confirm that V5.26 is displayed in the SETUP > INFORMATION menu.
