

Network RX Station PWS-100RX1 Software Version V1.2.0 Release note

December 15th, 2015

This document explains about the software update of the Network RX Station PWS-100RX1 V1.2.0 from V1.1.0. The applicable models are below.

Product name	Latest software	Release date
PWS-100RX1 CNC	V1.2.0	This announcement
PWS-100RX1 SYL	V1.2.0	This announcement

This software can be updated from V1.1.0. And it must not be downgraded to previous version after updating to V1.2.0. We couldn't guarantee any troubles after downgrading. For details about this version update in detail, Installer and Installation Procedure, please contact to your Sony dealer or a Sony service representative.

[Change Point]

<New Function>

1. File transfer function

The function is to transfer the file to the FTP server registered to this unit via the PWS-100RX1. The clip to be transferred can be selected from the list of the recorded clips on the SD card of the transmitter by browsing the CCM management screen and it can be transferred to the FTP server. This function can be controlled from [File Transfer] in global menu. The FTP server can be registered from [Use FTP] in [CCM] tab.

2. Control function of the camcorder

The camcorder which supports this function can be controlled remotely.

3. Function to start Auto streaming

The function is to start the streaming automatically. Two modes can be selected from [Auto Streaming Mode] in [CCM] tab. To enable this function, set [Auto Streaming] to [On] in the setting area of the streaming screen.

4. Monitoring function

The function is to set CCM management screen as monitoring purpose only. The online status and the streaming status of each transmitter can be monitored. To use this function, set the monitoring user in [CCM] tab.

<Limitations>

When the saving function of the streaming is activated, receivable number of the streaming is only one stream per one PWS-100RX1. Without using this function, up to 2 streams can be received as same as V1.0.
